

The District will integrate high performance energy goals into all facilities planning activities. These goals will be included in the educational specifications for all new educational facilities emphasizing the long term benefits of providing high performance functions.

For plans that include additions to and/or renovations of existing facilities, those high performance activities/functions that can be accomplished economically in the design will be included as long as there are measurable long term benefits to such inclusion. As a guide, the Administration is directed to follow the guidelines of the NH-CHPS program or its successor as managed by the NH State Department of Education Bureau of School Approval and Facility Management.
