Changing educational needs require the planning, design, and construction of new educational facilities as well as renovations and/or additions to existing schools. The size, complexity, and potential cost for such a program will require a comprehensive plan to include the following:

1. Educational program spatial requirements and assessment of the adequacy of existing facilities to accommodate present or proposed educational programs.
2. Cost/benefit considerations relating to facility modernization, renovation, or new construction.
3. An annual six-year capital improvements program showing population projections, new capital projects needed, and associated costs. Public will be notified of our capital improvement plan on a yearly basis.
4. Community use of schools and related facilities will be a consideration in all facilities planning.
5. An annual report reviewing projects underway or completed.

Construction plans, requests for bond money, and all other documents required to begin and/or complete needed school construction projects will be submitted to the public and appropriate local and state agencies in a timely manner.
